

Synthetic Genetic Report

Pocket Genes public demo source artifact. This sample is synthetic and does not describe a real person. It is not medical advice, not a diagnostic report, and not intended for clinical use.

Field	Synthetic value
Sample ID	PG-SYN-2048
Report type	Synthetic rare disease carrier panel
Laboratory date	2026-07-12
Provider	Example Reference Laboratory
Subject	Synthetic Example User

Reported finding

Gene	Variant	Zygosity	Laboratory classification
HBB	c.20A>T (p.Glu7Val)	Heterozygous	Reported pathogenic carrier finding

Laboratory note

This synthetic finding is shown only to demonstrate report transformation. Clinical interpretation requires professional review, patient history, family context, and the complete laboratory report. Pocket Genes should not diagnose, prescribe, or replace genetic counseling.

What Pocket Genes may extract

Laboratory-provided field	Pocket Genes use
Report type, provider, date, and sample ID	Creates a private report card and timeline entry.
Gene, variant, zygosity, and lab classification	Displays structured variant information without changing the laboratory statement.
Laboratory note about professional review	Creates educational context and suggested questions for a qualified professional.

Sharing defaults

The raw PDF, exact variant, and private notes are private by default. A user may choose to share a limited summary in RareFriends by Pocket Genes, but the app should not publish uploaded reports automatically.
