

# Genomic report - synthetic example

SYNTHETIC DEMONSTRATION. The patient, genes and findings below are fictional catalog fixtures.

## Order and patient context

Patient: Alex Example | Identifier: PATIENT-DEMO-001

Date of birth: 1990-01-01 | Order: PG-DEMO-ORDER-001

Objective: Evaluate the synthetic three-gene demonstration

Clinical suspicion: Demo clinical hypothesis only

Requested genes: PGGENE\_A, PGGENE\_B, PGGENE\_C

## Genomic findings

PGGENE\_A | PG\_DEMO\_1:101 A>G | Genotype 1/1

Synthetic example 1 of a structured relevance statement; no real disease or risk is asserted.

Evidence: PG\_DEMO\_KNOWLEDGE\_BASE:ENTRY\_001 | Knowledge version 1.0.0

PGGENE\_B | PG\_DEMO\_1:401 A>T | Genotype 1/1

Synthetic example 2 of a structured relevance statement; no real disease or risk is asserted.

Evidence: PG\_DEMO\_KNOWLEDGE\_BASE:ENTRY\_002 | Knowledge version 1.0.0

PGGENE\_C | PG\_DEMO\_1:701 A>C | Genotype 1/1

Synthetic example 3 of a structured relevance statement; no real disease or risk is asserted.

Evidence: PG\_DEMO\_KNOWLEDGE\_BASE:ENTRY\_003 | Knowledge version 1.0.0

## Scope and limitations

Evaluated genes: PGGENE\_A, PGGENE\_B, PGGENE\_C

Reference: PG\_DEMO\_REF\_1 | Supported variant classes: SNV, small\_indel

Synthetic catalog fixture illustrating variant annotation and structured result production.

Synthetic fixture only; the native sample bytes do not establish real gene coverage or clinical validity.

These tiny files demonstrate the interface contract. Their synthetic scope declaration is not evidence of real assay coverage.

## Source objects

Test order: obj\_demo\_order revision 1. Genomic result: obj\_demo\_interactive revision 1.
